

Solar Carports is a specialist in the design and installation of structural canopies to support solar power systems. With prompt integration, unsurpassed durability, fewer maintenance issues and affordable customization, you can feel safe with a Solar Carports integrated solution.

- Our structures are manufactured in America with US Steel.
- With manufacturing facilities in both California & Virginia, we reduce your shipping time and cost to the project site.
- Our structures can be seamlessly retrofitted to an existing carpark. Or we can work on your new developments.
- Our unique solutions will maximize your available space; to provide the highest amount of solar power per square feet available.
- We will lower your overall cost per installed watt.
- You decide the finishes – from water tight canopies; gutters and downspouts; LED canopy under lighting; to galvanized or painted finishes.
- We will get you up and running in super quick time – with multiple pre-engineered designs; or work with you on custom canopies as required.
